EDUCATION

University of Texas at Arlington

B.S. in Computer Science, Minor in Business

– GPA: **3.84/4.0**

Arlington, TX

Expected May 2028

TECHNICAL SKILLS

Languages: Python, C++/C, TypeScript, Java, SQL, Batch

Frameworks & Platforms: .NET, Node.js, Next.js, React, FastAPI, Electron, Unity

Libraries & Systems: NumPy, Pandas, SciPy, Librosa, OpenCV, scikit-learn, FFmpeg

Tools & Infrastructure: Git, GitHub, Firebase, PostgreSQL, REST APIs, Linux

EXPERIENCE

Peak Systems

Founder & Software Engineer

Fort Worth, TX

May. 2025 – Present

- Founded and bootstrapped a system optimization startup, building an organic distribution channel via Discord that scaled to over 800 community members.
- Engineered core system tuning workflows primarily using Batch scripting, integrated seamlessly with a custom user-authentication for secure account management and service delivery.

Premier Soccer Services

Data Analyst Intern

Katy, TX

May 2025 – Present

- Developed robust data engineering pipelines to ingest and process real-time match statistics across 300+ games, implementing automated data cleaning protocols to standardize raw, unstructured inputs.
- Engineered validation frameworks within the pipeline to detect anomalies and mitigate data poisoning risks from decentralized entry points, ensuring high-fidelity datasets for downstream reporting.

Tomorrow's Leaders Today

Data Research Intern

Dallas, TX

May 2025 – Aug. 2025

- Spearheaded comprehensive regional data analysis focused on labor markets and job search trends, utilizing Python (Pandas) to synthesize complex employment datasets into actionable reports.
- Designed automated tracking workflows utilizing SQL queries and relational databases to map regional job availability, streamlining data oversight and improving reporting efficiency by **60%**.

Edikt Studios

Software Engineering Intern (Optimization Team)

Fort Worth, TX

Aug. 2023 – May 2024

- Developed a 3D fighting game designed for low-end PCs, reducing RAM and CPU usage by **30%** through Unity Profiler to identify excessive draw calls.
- Refactored core systems to reduce code duplication and streamline feature development, improving iteration speed on gameplay mechanics by **50%**.

PROJECTS

EleSynth | Claude, Codex, Next.js, FastAPI, SciPy, Librosa, Gemini API

- Built a full-stack bioacoustics workbench to isolate elephant vocalizations from noisy field recordings using STFT and harmonic-percussive separation, enabling clean audio extraction and analysis.
- Designed a FastAPI backend with DSP pipelines (NumPy, SciPy, Librosa) to process WAV inputs into cleaned audio, spectrogram visualizations, and structured metadata outputs.

Network Optimization Agent | Batch, PowerShell, WMI, iPerf, Test Agents, Codex

- Developed an automated diagnostic agent utilizing Batch and PowerShell to scan local environments, applying a risk analysis framework to safely evaluate and optimize system settings for latency reduction.
- Engineered and deployed network test agents using WMI and iPerf to continuously monitor packet flow, validating configuration improvements and ensuring reliable, real-time data transmission.
